IN DAINTY LINGERIE

SOME UNIVERSALLY PRETTY DE-

SIGNS OF TRIMMING.

Hand Embroidered Garments Are To-
Day Easily Procurable—Advice
for the Woman Who Is In-
clined to Stoutness.

There are a number of unusually pretty designs of trimming on these dainty garments shown, also having drawers to match. One with only straps over the shoulders is designed especially to wear with evening gowns. One little French embroidered chemise is shown, the holes for running the ribbon in being worked right in the cloth, which wears better than the nainsook or lace beadings, which are set on. A variety of scallops for the edge may be bought for the small sum of three yards for ten cents, and the stamping transferred by the use of a hot iron. There is nothing daintier than these embroidered garments (entire sets to match), and no further decoration is necessary beyond the scalloped edge, holes for the ribbon, and an initial letter. Then instead of putting a ruffle on the bottom of the chemise work a deeper scallop.

Of nightdresses a variety of styles is shown, and any of these can be copied with the aid of a plain nightdress pattern. Whichever design is chosen, mark off on the pattern the shape that the trimming takes, and do the work from that. Do all tucking in the long part of the garment, as well as every other place, before any cutting is done. The chemise nightdresses have a bias seam down the middle back, put together by the narrowest French binding.

The woman inclined to be stout who will persist in wearing her clothes strained tightly across her ample proportions cannot be feeling happy this season. The kimono waist certainly is the last thing in the world to please her, and all the quaint, picturesque capes and boleroed waists must distress her dreadfully, while as for the wraps, they are voluminous to a degree; and even when one is extremely thin the modern cloak has what might be called a stoutening effect. But if the large woman be wise she will remember that the long lines

now in favor really are kind to her. As for the severely close cut fit, it is the greatest mistake fleshly people can make, especially as they never will allow of an "easy one," but everything has to be taken in until it has arrived at the point of splitting. If she only would remember it, fuller draperies at least leave the onlooker to wonder whether the fashionable silhouette, and not too solid flesh, is responsible. Tight fitting clothes leave no room for doubt.

Velvet Ribbon is a Vogue. Velvet ribbons were never used so much as this season, for, besides being a favorite hat trimming, the jumper fashion has been the means of utilizing endless yards. Lovejoy jumpers of velvet in two, or perhaps three, widths can be made at home even by unskilled fingers if one will only watch the models on exhibition in any of the large stores.

Velvet ribbon is not cheap, therefore it goes without saying that these pretty bodices are quite expensive bought ready for wear, but made at home the cost could be lessened one-half. Unless black is chosen the ribbon should be of the same color as the skirt to be worn with it, the blouse being generally white or a light color.

Lace on Everything. Never was lace more used. It is rarely put on plain, being incrustated with festoons of flowers cut from pompadour taffetas or mousselines, and set to the stuff of which the gown is made. There are quantities of narrow Valenciennes ruffles, of vaporous chiffons, bands of dyed gimpure and triande lace, needlework and ruchings, all are employed in order to effect variety.

MADE UP IN VELVETEEN.

Dressy Suit in Which Small Boy Ap-
pears at His Best.

Velveteen is one of the nicest materials for quite a little boy's suit, and if of a good quality will wear well. Our model is in a pretty shade of dark blue. The knickers are quite the first size; they are straight at the knees, being turned up with an inch-wide hem.

The tunic is double-breasted, fastening invisibly down the right side. A white leather belt is worn just below the waistline; it is passed through two tiny straps that are sewn each side the tunic. The collar is

of white silk, trimmed with a frill of the same and lace insertion.

Material required: Three yards velveteen.

LATEST JAP KIMONOS.

Some Exquisite Combinations in Popular Garments.

Long and short kimonos there are such as every one is familiar with, of flowered and plain silks and cotton crepe; but imagine a kimono of pale gray crepe, over which straggles a white viciaria vine growing in its natural fashion, a little heavily across the shoulders and sending out delicate creepers to the furthest edge of the sleeves and hem of the skirt. The only touch of color in this picture is the soft green of the leaves and gray brown of the stems.

Another exquisite combination is seen in a kimono of heavy soft fabric which looks like an Ottoman silk. Of pale pink, it is embroidered with branches of cherry blossoms, the angular, bare brown branches, dotted with the pink and white flowers spreading in the natural manner over the whole garment.

A kimono of pale blue crepe has pink roses growing rather boldly up from its hem and a flight of swallows across the shoulders. Another has stalks flying here and there in the wide expanse of blue.

There is also a kimono of that magnificent shade of Japanese red embroidered in palest pink and another of very dull purple, both of these crepe. Last and most expensive of all but, as is often the case, by no means the most beautiful, is a black satin kimono heavily embroidered with gold which costs \$300.

These kimonos are all made in Japan and, though many are cut just as a Japanese woman would wear them, with a scant skirt, others have extra fullness let into the back seam from the waist down which makes them more comfortable and graceful from the western point of view.

Three Thousand Six Hundred Miles of River Accounted For.

An old river pilot, in discussing the presidents voyage down the river from St. Louis to Memphis, says that very little idea of the western system of waterways can be gained from so short a voyage.

"The distance from St. Louis to Cairo is 198 miles; from Cairo to Memphis, 241 miles, so that the president saw only 439 miles of our western system below St. Louis."

"Now, the Ohio river from Pittsburg to Cairo, is 965 miles; the Kanawha is 72 miles; the Tennessee river, from its mouth to Florence, Ala., is 256 miles; the Mississippi, from St. Paul to Cairo, is 926 miles, and from Cairo to New Orleans, just 1,000. The Missouri river from St. Louis to Kansas City, is 386 miles, and above that point is navigable for nearly 2,000 miles more."

"Leaving out of the account, however, the upper Missouri, the Minnesota, Illinois, Arkansas, Red River and several others, some of which are navigable for considerable distances, there are in the main streams over 3,600 miles of water course, navigable nearly three-fourths of the year, and of this the president will see only a little more than one-ninth. It is inconceivable that so magnificent a system of water highways should be neglected, and the president's voyage, although it covers so small a part of the entire system, ought to be the beginning of a new era in river transportation."

TELEPHONY WITHOUT WIRES.

There is a Possibility of Talking to America.

Wireless telegraphy is at last an established fact, both scientifically and commercially.

A director of the Amalgamated radio-telegraphy company told a reporter that his company is ready to take orders for the installation of a wireless telephony system to cover a distance up to 25 miles, over fairly flat land or over water.

"Recently," he said, "I spoke in our laboratory at Berlin to a temporary laboratory which we have erected some seven miles away from that city, and that was not under the best conditions, because the aerial (or wire) at the temporary station was suspended between two factory shafts instead of the usual masts."

"From experiments which we have been conducting in Berlin we are able to guarantee perfect communication by wireless telephony over 25 miles of not too hilly country."

"The inventor of the continuous undamped wave, by which means only is wireless telephony made possible, was M. Valdemar Poulsen, a noted Danish electrical engineer. About eight months ago we bought M. Poulsen's invention, together with all his plant and experimental stations, and we have secured patents for the whole world with the exception of the United States."

"We are now converting our stations at Oxford and Cambridge into wireless telephony stations on the Poulsen system, and when the work is completed, which will probably be in six weeks' time, we shall begin to experiment there. I am confident that we shall be successful in establishing wireless telephonic communication over the 60 miles which separate the two university towns, and I do not hesitate to express my conviction that in a few years' time we shall be able to speak across the Atlantic."—London Express.

BOX SOCIAL

Held Thursday Night at Caledonia Town Hall.

A very elaborate Halloween social was given in the town hall at Caledonia Thursday night. The affair was given by Messrs. Frank Fell and Theodore Stafford and proved a success in every detail.

The occasion was a box social and about 100 people were present. Dancing, cards and all manners of social diversions were enjoyed until a late hour. At 10 o'clock the boxes were auctioned off and a very fine "feed" concluded the event.

HORSE WAS GONE

Left Hitching Post as Party Was in Progress.

While attending a party south of Prospect, Thursday night, the horse driven by Ollie Neimeyer broke from the hitching post and strayed away. When the young man left the party he found that his means of conveyance had disappeared. Thinking it a Halloween joke, he organized a searching party and all night scoured the country in quest of the missing horse and buggy. Friday morning a Prospect hiveryman informed him that he had found the horse wandering along a country road and had placed it in his barn. The buggy was but slightly damaged.

PAINFULLY INJURED

Carpenter Loses Footing and Falls Twenty-Four Feet.

B. F. Shaffer, a carpenter residing on Davis street, while laying a floor in an upper room of a new house on Davis street this afternoon fell and was seriously injured. By a misstep, Mr. Shaffer lost his footing and fell a distance of twenty feet.

The injured man was given attention by Dr. J. B. Taylor and upon examination it was found that no bones were broken but that the head and breast of the victim were badly bruised.

The commissioners held a hearing Thursday on the engineers report of the J. A. Seckles ditch in Claridon

Peoples' Transfer & Storage Co.

Improvements, large new house and up ground cellar, with slate roofs, two large barns, two granaries, and other necessary buildings. Good land, well tiled, well watered by 6 wells and the Whitestone river. Price \$75.00 per acre—terms reasonable. Call on or address, Wilson Imbody, 600 E. Church St., Marion, Ohio.

The report of the engineer was adopted and the ditch ordered sold November 9.

The first lecture on the LaRue citizens' lecture course was held in the town hall Thursday evening. Henry Clark of Chicago, a lecturer of wide repute was the attraction and a large audience was in attendance.

The west end fire department was called to the foundry of the Marion Steam Shovel shops about 1:30 o'clock this afternoon to put out a small blaze which originated in the cupola of the building. The department arrived before the flames had gained much headway. The alarm was sent in from box No. 63.

The Pythian Sisters of Caledonia entertained their husbands and friends in the lodge halls at that place Thursday evening at a Halloween social. There were about 125 people in attendance.

The evening was passed pleasantly at music, games and dancing. Refreshments were served and a general good social time was enjoyed.

WANTED.

WANTED—Work at carpenter trade or any kind of work. Apply to George Shair, 923 Wood street. 11-1-3tpd
